

The map illustrates the spatial distribution of the coefficient of waterlogging (Kw) in the Słupsk agglomeration. The legend indicates that green bars represent Kw values from 0.00 to 0.61, and red bars represent values from 0.61 to 1.00. The map shows a network of roads and rivers, with a detailed inset of the central urban area. The inset shows a grid of streets with individual Kw values for each plot. The map also shows the locations of various districts and landmarks, such as the Słupsk city center, Bobolice Koszalin, and Brzeźnica Grabowo Koczała.
